Statistical Annual 1984
Chicago Board of Trade
For the Year Ended December 31, 1984

ACKNOWLEDGEMENTS:

We express our appreciation to the following for their guidance and support:

To 1984 Statistics Committee.

To Staff Dan Rogers and Frank Chereck of Information Systems.

To CBT members, who have given us advice to improve the book.

Editor: Leslie Villarosa
Production Coordinator: Ingrid Prioleau
Introduction: Diana Ponce
Support: Dorothy Davis, Tammy Long, Mary Ann Yeung, Deborah Lynch

Cover Design: Richard S. Prey

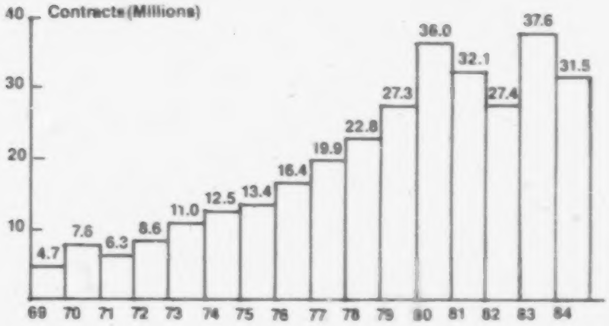
INTRODUCTION

Abundant stocks and a strong US dollar depressed Chicago Board of Trade grain and soycomplex futures prices throughout most of 1984. Trading volume in the CBOT soybeans, soymeal, corn, wheat, and oats commodities all displayed moderate declines in volume compared to 1983, when record high prices were set in commodities. In 1983 CBOT held 91.5% of the total grain and feed markets volume. However, in 1984 that percentage dropped by nearly 2%, to a total of 89.7%. The CBT wheat futures displayed the largest decrease in volume (down 6.5%) to a total of 2,974,886 in comparison to the other CBT grain markets. CBT soybean volume decreased by 2.4% to a total of 11,362,691 contracts for the year, and corn volume decreased by 1.2% in 1984, to a yearly total of 9,108,526.

The CBOT volume as a whole increased by 15.4% in 1984. The increase was reflected by gains in CBOT interest rate and the options futures markets. Agricultural options began trading for the first time in 50 years. October 31st, the CBOT introduced soybean options at a time when the underlying soybean market was declining to life of contract lows. Options differ from futures trading in that, for a set premium, they offer the right, but not the obligation, to buy or sell an underlying futures contract at a specified period of time. A major advantage is that buyers are not subject to margin calls. Staggering declines in the soybean futures market, during the time of the introduction of soybean options, failed to depress the options market as volume in that market totaled 72,969 contracts at the end of 1984.

The exchange introduced corn options on February 27, 1985, and silver options are scheduled to begin trading on March 29, 1985.

Total CBOT Agricultural Contracts (Standard CBOT Contracts for Wheat, Corn, Oats, Soybeans, Soybean Oil, Soybean Meal, Options on Soybean futures*) 1969—1984



(Source: Chicago Board of Trade)

*Options on Soybean Futures started trading October 31, 1983.

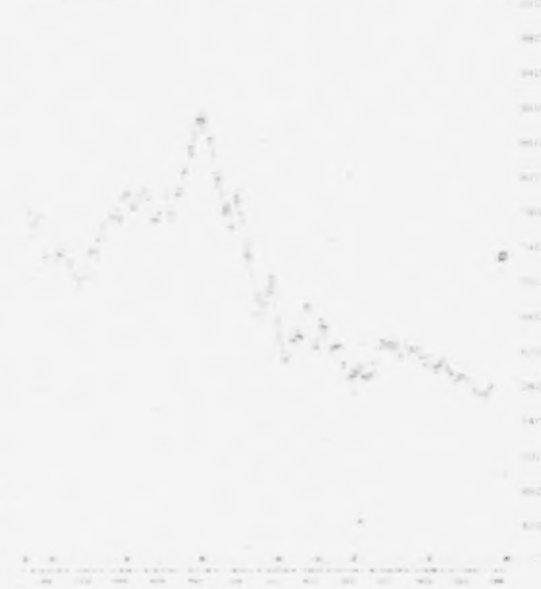
SOYBEANS

The US is the largest producer of soybeans, producing about 1.7 billion bushels a year. The soybean crop year extends from September 1 through August 31. The soybean belt consists of the central and southern areas of the corn belt. Soybeans are planted after corn, in May or early June. Almost two thirds of the total soybean crop is processed domestically into soyoil and soymeal. Soyoil is primarily used for human consumption products such as shortening, margarine, etc., while soymeal is used as a prime high-protein ingredient in many livestock feeds. The year 1984 began an unexpected price decline for the CBT soybean complex futures. Several factors, including a strong US dollar, weaker precious metal markets, beneficial rainfall across South America, and increased farmer selling created the bearish mood. Additionally the USDA raised the soybean production figure by almost 60 million bushels to a total of 1.595 billion bushels in its 1983 annual crop production report in January. Soybean futures prices dropped nearby 50 cents in the two days following the report.

The first acreage report for 1984 pegged soybean acreage at 65.2 million acres, a low figure, according to traders. This set a bullish tone in the soybean market for the short term, as prices climbed 80 cents by mid March. However, a lack of export demand and ample supplies kept a lid on soybean futures prices.

CBT soybean futures prices see-sawed through May, responding nervously to supply and demand news. By June the downward direction in prices took hold following the bearishly-construed soybean stocks figures as released as of June 1st conditions.

SOYBEANS



Source: Commodity Perspective

The USDA had reported soybean stocks at 456.3 million bushels, approximately 20 million bushels above average trade guesses prior to the report.

Favorable weather conditions across the soybean belt in the first week of July helped push soybean futures prices down nearly 90 cents. But, by August, crop concerns began to arise as continuous dry weather spread through the midwest. Weather forecasts through the month failed to show signs of precipitation that could alleviate stressed crop conditions. Traders considered the possibility of less pods, smaller beans, and lower yields. Despite the hot, dry weather in the US soybean belt, prices failed to rise above the 6.60 price level through the first week of September. The lack of export business was beginning to impact on soybean prices. The strong US dollar and high interest rates discouraged foreign countries from entering the US markets. The much-awaited September crop production report hurt prices again in predicting a higher than expected yield. The USDA had pegged soybean crop production at 2.028 billion bushels as of Septembeer 1st conditions, which was about 8 billion bushels above the August figure of 2.035 billion bushels.

A series of storms across the Midwest and Delta regions delayed harvest and reduced yield prospects through October and ended the steep decline in soybean futures prices. The continued strength of the US dollar and weak soybean prices kept major purchasers from extending coverage beyond immediate needs. An ample supply of other oilseeds and feed grains also lent a negative tone to the export market. In October soyoil stocks were at 727 million pounds, down 42% from 1983, and was the lowest stock level since 1974.

In November the USDA reported soybean crop production at 1.902 billion bushels, which fell below average trade estimates. The lack of buying interest and slack export demand ahead of the holidays in December depressed CBT soybean futures prices to life of contract lows.

CORN

Corn is grown through the US with most production concentrated in the central parts of the country, called the corn production belt. Farmers begin planting across the Corn Belt during the month of april, and by late May. By mid November, most of the corn is harvested.

When plantings of corn are delayed, critical pollination periods are advanced into the hotter part of the growing season, which could effect the yields of some crops. High temperatures could damge corn pollination even if sufficient rainfall occurs. The USDA's February 1984 planting intentions report showed planting intentions for corn at 81.8 million acres. During the months of July and August, the corn market focuses most of its attention on crop and weather conditions. Other concerns include supply and Soviet crop conditions. The USDA's corn stocks in all positions on April 1st was pegged at 3.258 billion bushels, compared with average trade guesses that fell below 3.100 billion bushels. Following the bearishly construed USDA report, prices in the corn market declined, with traders beginning to question the accuracy of the reports. Much of the strength preceding the weakness during early July was based on weather conditions across the Corn Belt. Two major fears arose during that time. First, was the delayed plantings of corn across the United States and second was the projections of droughts in the Soviet Union and Canada, as well as the United States. There were ideas that the poor corn growing conditions in the Spring would continue through the year, causing CBT corn futures prices to post the greatest advances for the year in July. However, those ideas were short-lived as much bearish news entered the market and depressed corn prices through the end of the year. The strength in the US dollar continued to pressure prices. Major competitors such as Argentina, Brazil, Canada, and Australia continued to export major grains at cheaper prices. The lack of export demand amidst an excess of corn supplies also lent pressure to the corn futures. The western half of the Corn Belt experienced a hard freeze in late September, but damage was minimal due to the crop already being ripe. Fine summer weather in early October encouraged rapid corn harvesting. Much of the soil had become depleted following a somewhat dry growing season. In October the USDA had announced that a paid diversion program would not be included in the 1985 feed grain program. This decision was based in part on some depleted soil conditions following a somewhat dry growing season. In order to participate, corn farmers would have to set aside 10% of their base acreage. The sign-up period began on October 15, and would continue through March 1st of 1985. While the election went underway in November, it had little to no influence on the agricultural markets. Corn harvest progressed extremely well during the end of October and early November, the peak time for harvest.

WHEAT

The year 1984 brought about the third largest wheat harvest ever in the United States. This reflected a season of ample supplies and a near-record disappearance due to increased exports. Wheat harvested in 1984 increased by 8% however, the average yield per acre declined slightly lower than 1983's record of 39.4 million acres. Exports and sales in mid July increased by 26% from the previous year, mainly due to the heavy shipments to the Soviet Union and China, two major customers of U.S. wheat. The lack of demand in all the CBOT major grain markets through February, along with an increase in production of US wheat, depressed wheat futures prices to establish most losses for the year. Major wheat competitors such as Canada, Australia, and Argentina had displayed interest in increasing their share of the existing markets, lending further pressure to prices. However, by mid-July, wheat futures prices staged a major rally for the year as prices rose on reports of moisture shortages and above normal temperatures in the major wheat growing areas of the USSR and Canada.

The USDA established a final 1984 Wheat Program early in the year, which included an acreage-reduction (ARP) program, a Cash Land Diversion (CLD), and a Payment-in-Kind (PIK) program. The final provision was not reached until Congress enacted the Agricultural Programs Adjustment Act of 1984 in the early part of April. The following are some changes that were made:

- The target price was lowered from $4.45 to 4.38 per bushel.
- The required acreage reduction remained at a minimum of 30% of base acreage.
- The PIK payment was increased from 75% to 85% of the farms established program yield times the acres diverted.

Price volatility in the wheat market took place in late May early June. Available stocks of wheat were tighter due to much of the supply in government loan or reserve programs. Without the sufficient free stocks of wheat to take in the minor changes in supply and demand, prices tended to flucuate dramatically.

Planting conditions were unfavorably dry in the US hard red winter wheat belt through September and October.

WHEAT

US DOLLAR

The value of the US dollar accelerated dramatically in 1984. The US dollar began to increase against the major currencies in 1980. The sharp rise in the value of the dollar in international currency markets contributed dramatically to the reduction in exports of US agricultural products. The index of the dollar exchange rates for agricultural exports increased nearly a third from fiscal 1980 and was at its highest level since 1971.

The continued strength of the US dollar through the 80's has made US products more expensive compared to other countries' currencies and therefore depressed the volume of US agricultural exports. In many parts of the industrial and midwest farmbelt, the powerful dollar had begun to deplete jobs and depress prices. The trade deficit, a staggering 130 billion dollars is likely to rise further in 1985. This deficit reflects the strong dollar, since cheaper imports compete with higher prices of American exports to foreign markets. Agriculture department economists have calculated that the strength of the dollar decreased total exports by 3 billion dollars from 1981 to 1982. In February 1985, US grain exports to all areas except the Soviet Union were currently 30%lower than in February of 1984, largely due to the US dollar.

Most of the world's other large grain producing areas had good harvest in 1984 compared with the previous year, with successful sales of large quantities of grain for export. The end result was a sharp decline in the amount of US export orders in 1984 and through 1985.

Australia lifted its tight credit restrictions and regained markets, especially the Middle East. In Argentina, wheat and coarse grain crops were better than expected, and that country took away much of the US export business. If the USSR's 1985 harvest goes as well as expected, the resulting decline in soviet imports would only add to the problems of a market surplus of US grains.

FOREIGN RELATIONS

US/USSR

The United States is the world's largest grain exporter, while the Soviet Union is the world's largest grain importer. Crop developments in the USSR grain growing areas are especially important to the United States since the success or failure of the Soviet harvest has a significant impact on our agricultural markets.

Before the 1980 grain embargo the US supplied more than 70 percent of the USSR grain imports needs. Exports declined to below 20 percent by 1982-83 and were maintained at those modest levels due to the US-USSR grain agreement, which calls for a minimum annual grain trade.

The 1983-84 marketing year saw improvement as the US grain sales exceeded 10 million metric tonnes. The 1984-85 marketing year continued to recover in February with sales already exceeding 15 million tonnes for the June-July year. The sales assure the United States of at least the third largest shipments to the Soviets. The primary cause of larger grain trade is associated with a smaller Soviet grain crop. The USDA estimated the 1984 grain harvest in the USSR at 170 million tonnes, which is the poorest since the disastrous 1975 crop. The USDA figure fell short of the projected target of 240 million tonnes compared to the projected consumption of more than 200 million tonnes. Various factors have contributed to the less than satisfactory Soviet grain harvest. Weather has been the key spoiler of the Soviet producer. Poor quality seed stocks, fertilizer shortages and lack of other production resources also have been detrimental to the Soviet crop production. In September, the USDA notified Soviet officials that the USSR would be able to pruchase up to 22 million tonnes of US grain in the second year of the long term grain trade agreement (LTA) before seeking further US government approval. The five-year long-term agreement (which began in August of 1983) calls for a minimum annual USSR purchase of 9 million tonnes of grain. It allows the USSR to buy up to 12 million tonnes overall without seeking further United States approval.

The USSR must purchase at least 4 million tonnes of corn and 4 million tonnes of wheat. The remaining 1 million can be satisfied by any combination of wheat, corn, soybeans, or soymeal. If the USSR chooses to apply soybeans or soymeal to the minimum, each tonne counts as 2 tonnes of grain within 1-million-tonne remainder. Last November, the Soviets met in the US for the first time in 5 years to discuss the agreement and export problems. Grain quality insect infestation problems with US grain were key discussion topics. Insect infestation problems rose in 1984 because of high temperature and humidity.

The Soviet Union is expected to remain a major importer in both the world wheat and coarse grain markets through 1985. With a significant amount of the USSR's annual grain purchases covered by grain agrements, competition will continue to exist among exporters for grain sales to the Soviets not yet covered by these agreements.

US/SOUTH AMERICA

South America agricultural production has risen about 35% in the past ten years. Significant economic progress has been made, even though a large number of farmers still practice primitive methods of farming.

Brazil has been especially successful in boosting and expanding its farm output. Argentina has also sharply expanded farm exports.

The two major United States competitors, Brazil and Argentina, have made rapid gains in soybean exports in the last ten years. The development of Argentina and Brazil's grain industry was prompted by the US export embargo, as well as the need to generate a much-needed foreign exchange. Both countries has utilized differential export taxes for beans and products in order to encourage the development of the domestic crushing industry.

In addition to soybeans, Argentina is a large producer of sunseeds, wheat, corn, sorghum, and sunoil. Argentinian wheat production decreased in 1984 for the second consecutive year since the record 1982-83 crop year. During the planting stage, southern wheat-producing areas suffered from heavy rains, while the northern areas experienced extreme dryness. These weather conditions during planting reduced the area sown to wheat by nearly 15% compared to the year. Later into the growing season stressed conditions were alleviated due to favorable weather across the wheat growing areas. Production forecasts were raised to 10.7 million metric tonnes, down 11% from the previous year.

The prospects for Argentina wheat exports continued to be favorable. Iran and Brazil are expected to be major purchasers of Argentine wheat through 1984-85. The Soviet Union is expected to purchase as much as 3 million metric tonnes in 1984. Despite any trade differences with Argentina, the Soviets may purchase even larger amounts of Argentine wheat in early 1985, depending upon the quality of US Hard Red Winter Wheat. China is not expected to import Argentina wheat in the 1984-85 marketing year.

Excellent moisture conditions in Brazil and Argentina enhanced grains and soybean crops prospects in those countries through most of 1984. The USDA estimated the 1984 Brazil soybean production at 15.7 million tonnes in it's December world crop production report compared with 15.4 million in 1983.

Brazil's soybean crop needs sufficient rainfall once or twice every two weeks to achieve maximum yields. The critical flowering and pod-filling stage occurs in late January and early February in Brazil. Soybean planting begins in September while corn plantings begin in late September, and increases rapidly through October.

In Argentina corn planting is completed by mid-November, with soybean planting nearly completed by the end nof November. Corn advances into tasseling and silking stages by mid-December in Northern Brazil, and by late December in sourthern Brazil. Argentina corn begins tasseling during the latter half of December.

Agrentina grain growing conditions were outstanding in 1984, especially for the country's Hard Red Winter Wheat crop. The USSR had already purchased new crop Argentine wheat for shipment in June and July in early December 1984. There were estimates that the USSR had purchased nearly two million tonnes of wheat by early December. The USDA estimated Argentine wheat production at 11.5 million tonnes, with soybeans at 6 million and corn at 10 million in the December world crop production report. Those figures compare with the 1983 figures of Argentine wheat production at 12 million tonnes, soybeans at 6.2 million, and corn at 9.5 million.

US/CHINA

Lagging purchases of U.S. wheat by China in 1984 was yet another factor that depressed US agricultural prices. China produced another record wheat crop in 1984, the third in a row. Nearly four years ago, China was America's largest wheat customer, taking almost 9 million metric tonnes. In 1984, China only purchased 4.4 million tonnes of wheat, and no corn, although the US/China grain calls for 15 to 20% of an annual 6 million tonne minimum to be corn.

News in early August that the US customs service would adopt new requirements regulating textile imports, left many grain traders cautious and wondering if those rules would affect US-China Trade relations. The rules, which took effect on Septemer 7th, were designed to prevent circumvention of textile import quotas when goods partly made in one country are finished in another. Those goods then enter the United States under the second country's more liberal quota. China and Hong Kong were expected to be affected the most by the new requirements.

China's long-term grain pact with the US calls for China to buy a minimum of 6 million tonnes of grain each calendar year from 1981 to 1984. The grain must be shipped by December 31st of each year. The agreement was met in 1981 and 1982. However China had purchased only 3.8 million tonnes of grain applied toward the 1983 agreement year, and only 4.4 million in 1984 because of another textile dispute. There were reports that China had harvested bumper wheat crops the last two years, and had little need for expensive US wheat.

China estimated a record 400 million tonne crop in 1984 compared with the 387.25 million in 1983. Another important factor for importers was that state procurements were rising sharply in commodity grain bases which feed cities, cash crop farmers, and food-deficit regions. Statistics showed that in 1983, eight Chinese grain provinces sold 11.85 million tonnes of grain to the government, an eighth of total procurements and a 43% increase for these areas over 1982.

At a meeting last November, US and Chinese officials did not discuss a new grain agreement to succeed the one that expired at the end of 1984. Grain sales to China for 1984 totaled 4,416,900 tonnes-all wheat according to the USDA. In 1983, sales totaled 3,828,600 tonnes, 2,447,300 tones of wheat, 1,381,300 tonnes of corn. For 1985 shipment, China had purchased 390,000 tonnes of wheat. Chinese officials gave no specific reason for failing to purchase the grain, but did complain about prices and the discovery of pesticides and insects in wheat shipments.

Section 1

Futures Prices
Volume of Sales

Price is a composite reflection of the changing ratio of supply and demand. Historical price data, supplemented by data on the availability and consumption of a commodity, allows commercial and speculative users of futures markets and other students of commodities trading to gain deeper insight into the dynamic nature of futures trading.

On the following pages you will find a complete listing of the high, low and closing futures prices of CBT commodities for each trading session during 1984. Additional tables of weekly, monthly and annual ranges of price—from high to low—provide a quick glimpse of price volatility.

Data on futures trading volume and open contracts (the number of futures contracts not yet closed out by delivery or an opposite transaction) are measures of the strength and liquidity of our markets. These measuresments are often analyzed in conjunction with price movements to predict future price trends.

Highlights

Options on Soybean futures
Chicago Board of Trade

Basic Trading Unit	One CBOT soybean futures contract of 5,000 bushels.
Description	At any time prior to expiration, the buyer of one soybean futures call (put) option may exercise his call (put) option to assume a long (short) position in one soybean futures contract of a specified month at a strike price set when the call (put) option was bought. Upon exercise, the seller of one soybean futures call (put) option assumes an opposite position of one short (long) soybean futures contract.
Strike Price	Strike prices will be listed in integral multiples of 25 cents. (e.g., \$7.25, \$7.50, etc.)
Premium Payment	The premium must be paid in full by each clearing member to the clearing corporation and by each option customer to his commission merchant when the option is bought, or within a reasonable time thereafter.
Premium Basis	Increments of one eight (1/8) of a cent per bushel or \$6.25 per contract.
Daily Trading Limits	Thirty (30) cents per bushel above or below the previous day's settlement premium.
Exercise	The option buyer may exercise his option on any trading day prior to expiration to assume a position at the strike price in the soybean futures market. The clearing corporation assigns overnight an opposite futures positon at the strike price to the option seller.

Section 2
Cash Prices

Futures prices represent the market's best assessment of the probable cash value of a commodity at a future date. Futures prices tend to follow the movement of cash prices and as a result, traders in commodity futures watch cash prices closely. Cash commodity prices are influenced by the prices of substitutes and the demand for products using the commodities as inputs.

This section contains daily, weekly and monthly cash prices for CBT commodities in Chicago and other principle market centers. Also presented are weekly and monthly cash prices for meals and oils competing with the soybean complex and selected livestock feed/price ratios which indicate the derived demand for grains used in feed.

Chicago Board of Trade
highest and lowest recorded prices for cash grain
(per bushel)

	Highest	date occurred	lowest	date occurred
Wheat	$ 6.91-1/2	Feb. 15, 1974	$ .44-1/2	Dec. 27, 1932
Corn	3.96-1/2	Sept. 30, 1974	.19-1/2	Sept. 8, 1896
Oats	2.93	June 25, 1975	.12-7/8	June 22, 1861
Soybeans	12.27	June 5, 1973	.57	Sept. 5, 1935

Section 3
Shipments·Receipts

Physical location of commodities in relation to the place where they are in demand is a critical factor in the making of both cash and futures prices. This section contains reports from the U.S. Department of Agriculture, terminal elevators and transportation agencies which show the physical location and movement of visible stocks in both CBT and related commodities for Chicago and other market centers.

Historical data on the movements of commodity stocks is arranged by mode of transport as well as location.

Section 4
Supply and Disposition
Miscellaneous Data

In this section the reader will find data on the production and consumption of commodities for a period of years. Reports include those from the U.S. Department of Agriculture detailing acreage, production and yield of major crops by state. Other reports from the U.S. Census bureau detail the monthly processing of the major oilseeds and stocks of refined products.

United States agriculture competes with hundreds of commodities from around the world. This section contains historical data on world-wide production and consumption of the major feed grains, which has an impact not only on pricing and profits in the agricultural sector, but also on the U.S. position in the internatonal economy.

The production and consumotion of non-agricultural commodities is fully detailed as well.

NOTES: Private building permits for (14,000 areas with permit systems, excluding farm), starts and completion are Census Bureau data. A dwelling unit is started when excavation begins. In the case of apartment building, all units are considered started at that time; however, all such units are considered completed when more than half of the units in the structures are ready to use. Private mobile home shipments are Mobile Home.

EXPLANATIONS:

Column 1 — Single Car Shipments
Column 2 — 3-Car Shipments
Column 3 — Single Car Shipments — Grain Products
Column 4 — 10 and 3-Car Shipments of Corn
(A)—Rates in dollars per car, minimum weight—180,000 pounds per car (Applicable on bulk shipments of: Corn, Rye, Soybeans, Wheat, Grain Sorghums)
(B)—Rates in dollars per car, minimum weight—180,000 pounds per car (Applicable on bulk shipments of: Barley, Oats)
(C)—Rates in cents per net ton, minimum weight—180,000 pounds per car
(D)—Rates in cents per net ton, minimum weight 270 tons (3-cars) 180,000 pounds per car
(E)—Rates in cents per 100 pounds—minimum weight—150,000 pounds per car
(F)—Rates in cents per 100 pounds (Applicable on 10-car shipments of corn, only) minimum weight—190,000 pounds per car
(G)—Rates in cents per 100 pounds (Applicable on 3-car shipments of corn, only) minimum weight—190,000 pounds per car
*Applicable in railroad owned or leased covered hopper cars—
higher rates will apply on shipments in shipper/receiver owned or leased covered hopper cars.

Multiple car export rates in covered hopper cars from Chicago, Illinois — In effect — January 1, 1985

(Rates in cents per net ton unless otherwise indicated)
Barley, Corn, Oats, Rye, Wheat, Soybeans

Hay	April to May	

Southern States

Crop	Dates to Plant	Weeks to Mature
Cotton	Feb. to May 15	20-30
Corn	Feb. to June	18-20
Wheat (W)	Sept. 20 to Oct. 20	36-40
Oats	Feb., May, Sept.	17
*Soybeans	May 1 to June 10	
Barley	April to May	17
Rye	Sept. to Oct.	43
Wh. Beans	March to May	7-8
Cabbage	Oct., Mar. to May	14
Watermelon	Mar. 1 to May 10	16-20
Onions	Feb. 1 to Apr. 10	16-24
Potatoes	Jan., Feb., to Apr.	11-15
S. Potatoes	May to June	12-15
Pumpkins	April to May 1	17-20
Tomatoes	Jan. to Apr.	14-20
Turnips	Feb., Apr., Aug.	8-12
Tobacco	Seed bar March	18-20
Cow Peas	May 1 to July 15	6-8

W-Indicates Winter
S-Indicates Spring
*Maturity period for Soybeans is undetermined. Soybeans planted as late as July 1 will mature.

WHEAT HARVEST TIME OF THE WORLD

The following shows the month of the wheat harvest in the wheat growing sections of the world:

January	New Zealand and Chile
February and March	East India, Upper Egypt
April	Algeria, Central Asia, China, Japan, Morocco and Texas
June	Turkey, Greece, Italy, Spain, Portugal, South of France, California, Louisiana, Mississippi, Alabama, Georgia, Carolinas, Tennessee, Virginia, Kentucky, Kansas, Arkansas Utah, Missouri and Oklahoma
July	Roumania, Bulgaria, Austria, Hungary, Czechoslovakia, South of Russia, Germany, Switzerland, France, South of England, Oregon, Nebraska, Minnesota, Wisconsin, Colorado, Washington, Iowa, Illinois, Indiana, Michigan, Ohio, New York, New England, Montana and Ontario, Canada.
August	Belgium, Holland, Great Britain, Denmark, Poland, Quebec, Western Canada, Columbia, North and South Dakota.
September and October	Scotland, Sweden, Norway and North of Russia.
November	Peru, South Africa and Australia
December	Burma and Argentina

CORN HARVEST TIME OF THE WORLD

January	New South Wales		
March and April	Argentina	September and October	Europe
April and May	South Africa	October	United States

SOYBEAN HARVEST TIME OF THE WORLD

April and May	Brazil	August thru October	Russia
July thru September	Indonesia	October	United States
Sept. and October	China (PRC)	October and November	Canada

UNITED STATES TARIFF DUTIES

The following tariff duties on cereals and farm products applies on imports into the United States (as of January 1, 1979)

U.S. TARIFF DUTIES	TARIFF DUTIES
Wheat Flour [1]	52 cents per 100 lbs.
Wheat	21 cents per bu. of 60 lbs.
Corn [2]	25 cents per bu. of 56 lbs.
Oats	4 cents per bu. of 32 lbs.
Rye Flour	22-1/2 cents/per 100 lbs.
Rye	6 cents per bu. of 56 lbs.
Barley	7-1/2 cents per bu. of 48 lbs.
Flaxseed	50 cents per bu. of 56 lbs.
Soybeans, other	Regular 1 cent per lb. and 2 cents per 1 lb. certain countries
Soybean Oil	All Soybean Oil 22-1/2% as valorem
Buckwheat	Free, hull or not hulled
Bran, Shorts, etc.	Free
Barley Malt	30 cents per 100 lbs.
Rye Malt	22-1/2 cents per 100 lbs.
Hay	Free
Rice Fiber and Rice Straw	$5.00 per 2,000 lbs.
Other Straw	Free
Sheep	Free
Hogs	0.5 cent per lb. and 2 cents per lb. certain countries
Lard	3 cents per lb.

[1] Wheat, Flour, by a proclamation of the President (TD 50404) under the authority of section 22 of the Agricultural Adjustment Act of 1933, as amended (7 USC 624), imports for consumption of wheat and wheat flour fit for human consumption, with certain exceptions stated in TDs 50609 and 50863, are limited to annual quotas of 800,000 bushels of wheat and 4,000,000 pounds of flour. The allocation of these quotas for foreign countries is set forth in TD 50404.

[2] Seed corn, certified by a responsible officer or agency of a foreign government in accordance with the rules and regulations of that government to have been grown and approved especially for use as seed, in containers market with the foreign government's official certified seed corn tags ... 6¢ per bu. of 56 lbs.

The duty on cattle is as follows:
Cattle weighing less than 200 lbs. each are dutiable at 1-1/2 cents per lb. but the rate will be increased to 2-1/2 cents per lb. for importations beyond 200,000 head entered in the 12 month period beginning April 1 in any year.

Cattle weighing 200 lbs. or more but less than 700 lbs. each are dutiable at 2-1/2 cents per lb.

Other cattle imported specially for dairy purposes: cattle specially for dairy purposes 1-1/2 cents per lb. but the rate will be increased to 2-1/2 cents per lb. on importations beyond 400,000 head entered in any 12 month period beginning April 1 in any year and to more than 120,000 head entered in any three month period beginning April 1, July 1, October 1, January 1 within any such 12 month period.
